WYLD TECHNOTE:
Indexed and Searchable Fields of the MARC Record for Keyword Searching in Workflows*

Every record in the SirsiDynix Symphony database has standard entry tags. SirsiDynix Symphony allows one or more MARC entry tags to be represented with an index **synonym** name. The search can be limited to certain fields and entries within a bibliographic record without typing several entry tags. Search the General index by entering the search term followed by the keyword index synonym enclosed in braces, or curly brackets. SirsiDynix Symphony searches only the specified entries/fields represented by this abbreviated name.

Any searchable keyword index external/internal synonym can be entered.
See the following list of SirsiDynix Symphony equivalent search fields for keyword indexes. These tags are most effective when conducting a general index search.

Index	Synonym	MARC Fields
Author	AU	100, 110, 111, 505(subfield r), 700, 710, 711
Title	TI	130, 245, 246, 440, 505(subfield t), 730, 740
Periodical Title	PER	245, 246, 780, 785
Subject	SU	600, 610, 611, 630, 650, 651, 655, 690, 691
Series	SER	400, 410, 411, 440, 490, 800, 810, 811, 830, 840

For example, to find any materials with the author Charles Dickens, enter a General search with the following text.

       Dickens {AU}   or   Dickens {100}

SirsiDynix Symphony locates items by searching all of the MARC entry fields represented by the keyword index synonym, AU. In this example, SirsiDynix Symphony searches the 100, 110, 111, 505r, 700, 710, and 711 entry tags for Dickens.

*Searches in the Enterprise public catalog may not conform to these identified fields.
